

Global Superstore - Power BI Visuals Assignment

Dataset: Global_Superstore2.xlsx

Records analyzed: 51,290

This report contains the requested analysis, the Power BI field setup, and the result obtained from the supplied dataset.

Question 1: Create a Card Visual to show Total Sales.

Power BI setup: Card visual -> Field: Sales (Sum).

Result: Total Sales = **\$12,642,501.91**.

TOTAL SALES

\$12,642,501.91

Question 2: Create a Donut Chart showing Total Sales by Ship Mode and identify the highest ship mode.

Power BI setup: Legend: Ship Mode; Values: Sales (Sum).

Result: Standard Class has the highest sales at \$7,578,652.11.

Question 3: Create a Line Chart showing the Sales Trend over time (by Month and Year). Is there any seasonal pattern?

Power BI setup: X-axis: Order Date (Month-Year); Y-axis: Sales (Sum).

Result: Sales generally strengthen toward the later months of the year. September-November-December are repeatedly strong, while January-February are relatively lower. The highest Month-Year is **November 2014** with **\$354,054.40** in sales.

Question 4: Create a Bar Chart to compare Sales by Category.

Power BI setup: Y-axis: Category; X-axis: Sales (Sum).
Result: Technology is highest (\$4,744,557.50), followed by Furniture (\$4,110,874.19) and Office Supplies (\$3,787,070.23).

Question 5: Create a Matrix Visual to display Sales by Month and Category and identify the month with the highest sales.

Power BI setup: Rows: Month; Columns: Category; Values: Sales (Sum).

Result: When months are combined across all years, **December** has the highest total sales of **\$989,196.71**.

Question 6: Create a Decomposition Tree for Sales Breakdown.

Power BI setup: Analyze: Sales (Sum); Explain By: Market -> Category -> Sub-Category.

Result: The largest market is **APAC** (\$3,585,744.13). Within APAC, **Technology** is the largest category (\$1,357,490.23).

Question 7: Create a Scatter Chart to compare Discount vs. Profit by Sub-Category. Are there outliers where high discounts resulted in negative profit?

Power BI setup: X-axis: Discount (Average); Y-axis: Profit (Sum); Details: Sub-Category.

Result: Yes. **Tables** is the clearest outlier, with an average discount of **29.1%** and total profit of **\$-64,083.39**.

Question 8: Use a Funnel Chart to show the number of orders by Customer Segment.

Power BI setup: Category: Segment; Values: Order ID (Distinct Count).

Result: Consumer = 13,104 orders, Corporate = 7,673, Home Office = 4,687. Consumer has the most orders.

Question 9: Use a Waterfall Chart to analyze how Profit changes by Category.

Power BI setup: Category: Category; Y-axis: Profit (Sum).

Result: Technology contributes the most profit (**\$663,778.73**), followed by Office Supplies (**\$518,473.83**) and Furniture (**\$285,204.72**). Total profit is **\$1,467,457.29**.

Question 10: Create a Dual-Axis Line Chart to show Total Sales and Profit Over Time (by Month).

Power BI setup: Use a Line and Clustered Column/Combo chart (or line chart with secondary axis where available). Shared axis: Order Date (Month-Year); Values: Sales (Sum) and Profit (Sum).

Result: Sales and profit fluctuate over time, with stronger sales toward the later months. Profit generally rises when sales rise, although the relationship is not perfectly proportional because discount and product mix affect profitability.
